showers

2300 Liters Water

Impact Cotton/Polyester yarn 100% recycled - per 1 kg	kg CO ₂ eq	Energy Usage in MJ	Water Consumption in Liters	Land Use m ² crop eq
Fibers	xx	xx	xx	xx
Yarn production	xx	xx	xx	xx
Finishing	xx	xx	xx	xx
Total	1,2	15,4	300	1,5

The calculation of the bAwear score is based on the proprietary bAwear textile model and SimaPro software and on the input (primary data) provided. In case primary data was lacking, secondary data was used. The secondary data are extracted from the EcolInvent® database and publicly available literature sources. When using secondary data (in part or solely), the results of the calculation are only indicative. The calculations are performed using ReCiPe 2016 midpoint method. Data security is covered by our partner PRé Consultants, having implemented ISO 27001:2013
